

AG 107

Telescopic ramps

Ramps characterised by high versatility, adaptable to numerous environments thanks to their ability to handle different height levels. The adaptability of height and length allows for minimal space requirements when not in use.

- Their structure is made of extruded material to guarantee maximum solidity.
- The surface is designed to be safe and non-slip.
- They offer long life due to their lightweight construction.
- They are weather-resistant.
- End profiles ensure optimal stability.
- Equipped with comfortable handles for easy transport.
