

GILDA ECO

Elevating armchair with two motors

The GILDA ECO armchair is an electric relaxation armchair with stain-resistant and water-repellent fabric. It is equipped with two motors that allow backrest inclination and footrest elevation to improve the comfort of the user and the performance of all those operations necessary for the movement of persons with reduced mobility. The lift-up movement helps the user get into an upright position. The possibility of pulling out both the side headrest flaps and the armrests allows a comfortable transfer of the person to and from the bed or for whatever movement is needed.

The armchair is equipped with a roller system useful for moving over short distances.

■ ROLLER SYSTEM - STANDARD

NEW

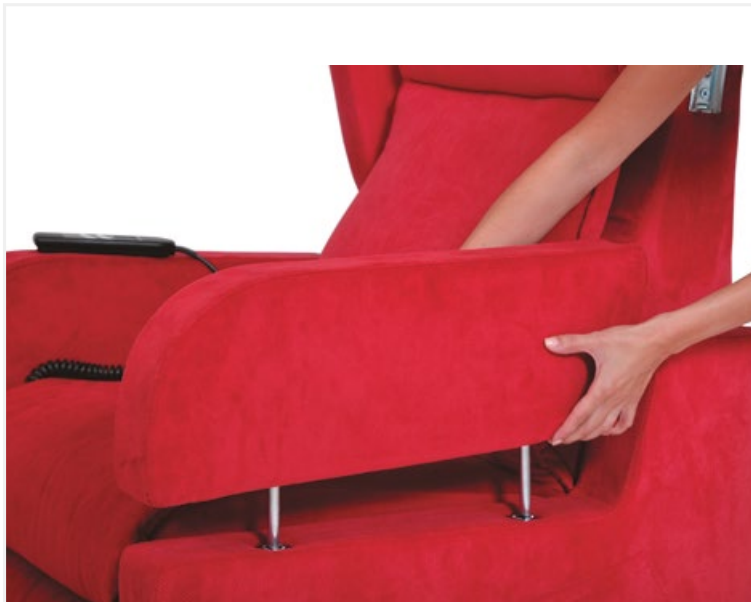

Roller system (standard): This is a practical lifting mechanism on four independent wheels operated by a foot lever at the rear: a functional and practical system that allows the armchair to be easily transported from one room to another.

VERSATILITY

Disassembly of the side parts allows the user to move from the armchair to the bed, or wheelchair, etc. The removable armrests also allow the armchair to be placed under the dining table.
