

OLIMPIA

Elevating armchair with two motors

Olimpia is an electric elevating armchair. It consists of a wooden frame and steel mechanics, covered in Alcantara-effect microfibre. Its design ensures a comfortable welcome and its seat allows you to change position gradually and gently. The sliding seat and the side headrests on the backrest ensure a high level of comfort. The movements are controlled by an intuitive remote control that lets you select the ideal position for rest and the lift-up movement allows people with mobility difficulties to get up easily. The 2 lift version of Olimpia enhances the independence of the backrest tilt and leg rest elevation.
